

I CLAIM:

- 1 1. A mobile digital security system comprising:
2 a digital video recorder disposed in each of at least one mobile unit and
3 operable to generate a digital video/data signal;
4 a wireless interface coupled to the digital video recorder for encapsulating
5 and transmitting the digital video/data signal;
6 a wireless device coupled to the wireless interface through a wireless
7 network for receiving the encapsulated and transmitted digital video/data signal;
8 and
9 a server for processing the received digital video/data signal.
- 1 2. The mobile digital security system of claim 1, wherein the wireless network
2 is a TCP/IP based network.
- 1 3. The mobile digital security system of claim 2, wherein the wireless network
2 is a 802.11b wireless WLAN.
- 1 4. The mobile digital security system of claim 1, wherein the server is
2 operable to communicate with the digital video recorder.
- 1 5. The mobile digital security system of claim 1, wherein the mobile unit is a
2 police vehicle and the server is disposed in a police station.
- 1 6. The mobile digital security system of claim 1, wherein the server is
2 operable to provide remote video/data management.
- 1 7. The mobile digital security system of claim 1, wherein the server is
2 operable to provide a real time streaming gateway to a plurality of digital video
3 recorders.

1 8. The mobile digital security system of claim 1, wherein the server is
2 operable to provide remote real time backup at a variable frame rate.

1 9. The mobile digital security system of claim 8, wherein the variable frame
2 rate comprises a frame rate from one-half frame per second to thirty frames per
3 second.

1 10. The mobile digital security system of claim 1, wherein the server is
2 operable to provide post recording backup.

1 11. The mobile digital security system of claim 1, wherein the server is
2 operable to provide a log system for tracking an event.

1 12. The mobile digital security system of claim 1, wherein the server is
2 operable to provide a log system for tracking an access to the server.

1 13. The mobile digital security system of claim 1, wherein the server is
2 operable to provide HTML based configuration with password authentication.

1 14. The mobile digital security system of claim 1, wherein the server is
2 operable to provide triplex real time backup.

1 15. The mobile digital security system of claim 1, wherein the server is
2 operable to provide real time monitoring.

1 16. The mobile digital security system of claim 1, wherein the server is
2 operable to provide playback.

1 17. The mobile digital security system of claim 1, further comprising a remote
2 viewing device coupled to the server.

1 18. The mobile digital security system of claim 17, wherein the server
2 comprises an IP based streaming module operable to provide digital video/data
3 to the remote viewing device.

1 19. The mobile digital security system of claim 1, wherein the server
2 comprises an event triggering macro operable to send data to the digital video
3 recorder.

1 20. The mobile digital security system of claim 1, wherein the server is
2 operable to provide time and event search queue management.

1 21. The mobile digital security system of claim 1, wherein the server
2 comprises a digital right management module operable to provide playback
3 authentication.

1 22. The mobile digital security system of claim 1, further comprising a
2 monitoring station.

1 23. The mobile digital security system of claim 22, wherein the server
2 comprises a protocol for real time synchronization between the monitoring station
3 and the digital video recorder.

1 24. The mobile digital security system of claim 1, wherein the server is
2 operable to provide data synchronization in a database.

1 25. A method of providing mobile digital security comprising the steps of:
2 generating digital video/data at a mobile unit;
3 encapsulating and transmitting the digital video/data;
4 receiving the encapsulated and transmitted digital video/data; and
5 processing the received digital video/data.

1 26. The method of providing mobile digital security of claim 25, wherein the
2 digital video/data is generated by a digital video recorder.

1 27. The method of providing mobile digital security of claim 26, further
2 comprising the step of transmitting digital control data to the digital video recorder
3 over an IP network.

1 28. The method of providing mobile digital security of claim 25, wherein the
2 digital video/data is stored in a digital storage media.

1 29. The method of providing mobile digital security of claim 25, wherein the
2 digital video/data is transmitted over a wireless TCP/IP based network.

1 30. The method of providing mobile digital security of claim 25, wherein the
2 digital video/data is processed by a server.

1 31. The method of providing mobile digital security of claim 30, wherein the
2 digital video/data is synchronized with a server database in real time.

1 32. The method of providing mobile digital security of claim 31, wherein the
2 synchronized digital video/data is accessible at standard interfaces to remote
3 clients.

1 33. The method of providing mobile digital security of claim 25, further
2 comprising the step of providing encrypted password authentication, before
3 encapsulating and transmitting the digital video/data to a server.

1 34. The method of providing mobile digital security of claim 25, further
2 comprising the step of transmitting the processed digital video/data to a remote
3 client over an IP network.
